

## TECHNICAL SHEETS

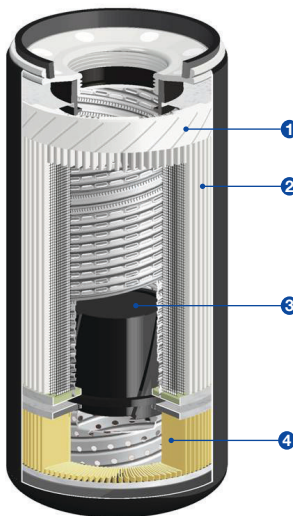

## XD (XTENDED DRAIN)

The innovative XD (Xtended Drain) line of heavy-duty WIX Filters incorporates the following features:

- Nylon fins that spin the incoming contaminated oil in a clockwise, centrifugal flow to immediately disperse heavy contaminants;
- A glass-filled nylon spinner that mixes oil from the coarse and fine media sections in a counter-clockwise flow on the clean side of the filter;
- WIX XD-55 four-layer wire-backed synthetic media in the fine filtration element;
- WIX XD-80 high-strength, multi-composite media in the coarse filtration element.

The result is a filter that removes oil contaminants more effectively and lasts much longer than conventional filters. In product testing, the XD filter typically demonstrates up to 30 percent more capacity, finer particulate efficiency and up to 50 percent longer life than its competitors.

### XD Features

1. Nylon fins
2. Four-layer wire-backed media
3. Glass filled nylon spinner
4. High-strength, high-synthetic by-pass media
