

TECHNICAL SHEETS

XE (XTRA EFFICIENCY)

XE

The innovative XE (Xtra Efficiency) line of heavy-duty WIX Filters are of a similar size to the standard filter they replace, but are designed for Extreme Contamination Conditions. This would cover such applications as trucks or generators operating at mine sites. They are high efficiency oil filters that are standard specification on some modern engines with high pressure common fuel rail or electronic unit injection. The higher efficiency is achieved by using synthetic (i.e. fibre-glass) media, sometimes mixed with other media on some specific applications and wire backed in most applications.
